Automatic online vehicle selection using the VIN number				x	x
Automatic online vehicle selection using the license plate number			x		x

The Crash Recovery System specifically developed for emergency responders is a valuable source of information during emergency response. After the selection of the correct vehicle model, the CRS displays an interactive top and side view of the vehicle, in which the exact locations of the rescue relevant equipment is represented with standardized icons and colors. Additional information can be accessed to find out how to disable the vehicle safety systems.

Moditech Rescue Solutions B.V. designed the Crash Recovery System already in 2002 in close cooperation with all major car manufacturers and rescue experts across the world. Rescue relevant technical vehicle information in regards to restraint systems, safety components, reinforcements and/or propulsion systems are available at your fingertips!
